

Exercise Basics

Question_01

- **define two number and print sum, minus, multi, division and average of them.**

Question_02

- In the following 2 lines, print the value of all variables.

```
number, name, flag = 10, "python", True  
num1 = num2 = num3 = 300
```

Question_03

- In the following lines, print the type of each variable.

✓ **Points:**

✓ **Some of them has error**

```
number1 = 10  
number2 = 2.4  
name = "python3"  
flag = "True"  
flag2 = false  
flag3 = True  
name2 = python
```

Question_04

- A number of variables are defined below. Which one's name is wrong?

```
num 1 = 10
```

```
num-3 = 2.4
```

```
name1 = "python3"
```

```
var2 = 12
```

```
2var = 16
```

```
@var = 20
```

```
_var = 12
```

Don't give up on your dreams 😊
